

Life after Code in Place

Free Python sites/resources

<https://automatetheboringstuff.com/>

- Ex. scraping websites

<https://www.codecademy.com/catalog/language/python>

- Data visualization, data science, etc. (not all courses are free)

<https://programiz.pro/course/learn-python-basics>

- Exercises and projects - not fully free but you can get a free Pro trial

<https://exercism.org/tracks/python/exercises>

- Exercises

Lots of sites: <https://wiki.python.org/moin/BeginnersGuide/NonProgrammers>

Using Python skills at work

<https://charlesarea.medium.com/using-python-for-your-daily-work-streamlining-your-workflow-and-boosting-productivity-a69db1bdc6cd>

https://www.reddit.com/r/Python/comments/ct0hru/for_those_with_normal_office_jobs_how_did_you_use/

Automating tasks

- Reading/writing files
- Data processing - clean CSV files
- Scheduling tasks - run a script every day at a certain time
- Web scraping

“Will AI take programming jobs?”

AI will help programmers be more efficient!

Instead of trying to dig through documentation, you can save a bit of time with AI

ChatGPT is good at explaining the basics and helping you get started, but not the best at debugging or writing lots of code (you have to keep clarifying)

How do you keep progressing? What else can I do to keep pushing and growing my understanding of coding?

Web development (front-end development)

- Python frameworks
 - Django
 - Flask
- React/JavaScript

Data analysis

- R or Python

Machine learning, AI

- Python

“Full-stack”: frontend and backend - backend can use Python, Java, JavaScript, etc.

Mobile development - Swift for Apple/iOS

MOOCs, online classes, online resources (*Not all are free)

Class that Stanford students take after CS 106A (Code in Place material):

<https://web.stanford.edu/class/cs106b/>

- Deals with C++, data structures (things like lists, dictionaries), and basic algorithms
- Very old version of the course (all material publicly available):

<https://see.stanford.edu/Course/CS106B>

Harvard's CS 50: <https://cs50.harvard.edu/x/2024/>

- Intro to lots of different programming languages; different 'tracks' on edX

Front-end development resources

<https://www.theodinproject.com/home>

<https://www.freecodecamp.org/>

Codecademy - good for basics: <https://www.codecademy.com/catalog>

Google data analytics: <https://www.coursera.org/professional-certificates/google-data-analytics>

What is data science? <https://www.coursera.org/learn/what-is-datascience>
